PROFESSIONAL SUMMARY

Results-driven Software Engineer with 2 years of experience building scalable Java/Spring Boot backend systems, ReactJS frontends, and production-deployed AI applications — including a live multi-tenant RAG platform (Spring AI, pgvector, RabbitMQ) processing enterprise documents with hallucination-guarded LLM responses.

Hands-on with Microservices (Java 21 virtual threads), Docker, Kubernetes, AWS, Azure DevOps CI/CD pipelines, and Prometheus/Grafana observability — contributing to production systems processing 10,000+ records daily at 99.9% uptime with a 95% deployment success rate.

Strong in PostgreSQL/SQL Server, unit testing with JUnit 5 & Testcontainers (85%+ coverage), performance monitoring, and cross-functional Agile collaboration; OCI 2025 Certified Generative AI Professional.

CORE COMPETENCIES

AI & Backend	Java 21 Spring Boot Spring AI Spring MVC Spring Security Microservices REST APIs RAG Pipelines Hibernate JPA Apache Camel RabbitMQ Resilience4j Apache Tika
Frontend	ReactJS JavaScript (ES6+) HTML5 CSS3 Node.js Redux TypeScript SSE Streaming Unit Testing Browser Testing & Debugging
Cloud & DevOps	AWS (EC2, S3, EKS, Lambda) Azure Azure DevOps Docker Kubernetes CI/CD Pipelines Jenkins GitHub Actions IaC Prometheus Grafana Micrometer
Database & Quality	PostgreSQL pgvector Redis MySQL SQL Server Vector DB SQL Optimisation JUnit 5 Mockito Testcontainers OpenAPI/Swagger Agile/Scrum

WORK EXPERIENCE

Happiest Minds Technologies

Aug 2024 – Present

Software Engineer – Java & ReactJS

Bengaluru, India

- Worked on full stack enterprise web application development using Java 21/Spring Boot backend and ReactJS frontend — building HTML5/CSS3/JavaScript (ES6+) UI components with Redux, delivering a responsive web interface for 100+ clinical users with cross-browser testing and debugging.
- Contributed to Java/JEE Microservices backend using Spring Boot and Apache Camel — implemented RESTful APIs for data processing pipelines handling 10,000+ records daily on AWS at 99.9% uptime, with Hibernate/JPA data access and optimised PostgreSQL/SQL queries.
- Contributed to CI/CD pipelines using Azure DevOps and Jenkins with Docker and Kubernetes on AWS EKS — achieving a 95% deployment success rate and 60% reduction in deployment time through automated build, test, and deployment workflows.
- Applied unit testing using JUnit 5, Mockito, and Testcontainers (85%+ coverage); performed debugging and browser testing; implemented Prometheus/Grafana performance monitoring — reducing MTTR by 45% across 8+ Agile/Scrum sprint cycles.
- Worked with PostgreSQL and SQL Server databases — implemented optimised SQL queries, Redis caching (cutting API response times by 40%), and maintained OpenAPI/Swagger technical documentation for all RESTful API endpoints.

Happiest Minds Technologies

May 2024 – Aug 2024

Engineer Trainee – Java & Full Stack Development

Bengaluru, India

- Progressed to Software Engineer within 3 months; contributed to Java/Spring Boot REST API development, Hibernate/JPA backend layers, ReactJS frontend modules, and unit testing across HTML, CSS, JavaScript, and Java.

KEY PROJECTS

EAKP – Enterprise AI Knowledge Platform (Personal Project) eakp.vercel.app

2025 · Production

Java 21 · Spring Boot · Spring AI · React 19 · pgvector · RabbitMQ · Redis · PostgreSQL · Docker

- Built and deployed a production multi-tenant RAG platform (5 Spring Boot microservices, Java 21 virtual threads) featuring hybrid search (pgvector HNSW + PostgreSQL FTS) fused via Reciprocal Rank Fusion, LLM re-ranking, and a hallucination guard that scores every answer for faithfulness before caching — deployed live on Render + Vercel + Neon ([GitHub](https://github.com)).
- Implemented async document ingestion pipeline (RabbitMQ → Apache Tika → chunker → Mistral embeddings → pgvector) with dead-letter queue and idempotent retries; added Resilience4j circuit breakers on all LLM calls; instrumented with Micrometer → Prometheus → Grafana with correlation IDs across all services.

Happiest Health – Enterprise ERP Integration Platform – Java · Spring Boot · Apache Camel · AWS EKS · PostgreSQL · Docker ·

Kubernetes

May 2024 – Present

- Worked as backend developer on an end-to-end ETL integration platform connecting third-party ERP (ERPNext) with healthcare systems via Apache Camel — implemented Integration APIs and data transformation pipelines; deployed on AWS EKS handling 15,000+ records/hour, reducing integration costs by 70%.

EDUCATION

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional

Issued Oct 2025 · Expires Oct 2027

Generative AI · OCI AI Services · LLMs · Retrieval-Augmented Generation (RAG) · Vector Databases · Responsible AI

Java Full Stack Development with AWS – Happiest Minds / StackRoute (NIIT)

Nov 2024

Spring Boot · Microservices · ReactJS · AWS · Azure DevOps · CI/CD · Unit Testing · PostgreSQL
